

APPEAL TO DONORS

**NOT A FLOWER BUT A PETAL CAN SUFFICE.
SERVICE TO HUMANITY IS SERVICE TO GOD**

To enable JHCF to continue and expand the program of free heart operations for the poor people whose number is still large in and around the city and much larger in the villages of the District and other parts of the country, it is humbly requested to **kindly donate generously for the noble cause which will save the life of heart patient & his dependent whole family.**

Heart Disease treatment and prevention is an expensive proposition and beyond the reach of poor and middle class people. In the service of humanity please come forward. to help such needy patients as much as you can. You will appreciate that foundation requires huge funds to run its activities smoothly. We therefore fervently appeal to you to contribute generously by Your little contribution will save somebody's life and rejuvenate his heart. This will give you the joy and sense of fulfillment in real sense.

*Feel the happiness that your contribution
Has made some body smile with joy.*

Jain Heart Care Foundation

Jain Heart Care Foundation is a non profit, non-Govt., organization
Registered with charity commissioner, Mumbai in 1999. Regd. No.
U/s 12 A of Income Tax Act 1961 under 80 G exemption.

THE VISION

Heart disease is second most common and fatal disease after infectious and nutrition related diseases in India. Majority of these heart diseases are treatable and precious lives can be saved. One life saved is one family smiles. As heart diseases are complex matter so also its treatment. This requires support from community, institutions and professionals.

- Heart disease affects all age group, New born to elderly.
- New born suffers from congenital heart disease [holes in heart, blue babies].
- Young & adolescent group suffers from rheumatic heart valvular disease.
- Adults suffer from coronary heart disease [heart attacks].
- Elderly people suffer from hypertension, heart rhythm disorders and also from coronary artery disease.

Heart disease is increasing at a very alarming rate in our country. These cardiac patients require relevant investigation and further medical or surgical treatment. Cardiac rehabilitation and preventive measures are also very important steps in order to control this epidemic of heart disease. Heart surgery has become a rewarding reality, whether it being a heart valve surgery, or coronary bypass surgery or a child with a hole in the heart undergoing surgical closure, all can be successfully treated.

Despite being a successful reality heart surgery is prohibitively expensive costing thousands to lakhs of rupees. Majority of our country's population belong to lower income group. Their income is just sufficient to manage daily expenses, any expenditure on health is simply unaffordable thus bringing misery to family Every needy poor patient suffering from heart disease even if he wants to undergo treatment he / she will have to sell or mortgage property or borrow loan from society to arrange funds as heart disease treatment is expansive.

It is of paramount importance to engage qualified and competent professionals and top quality institutions to provide relief of high standard. In this regard Jain Heart Care Foundation has dedicated itself since 1999.

WHAT IS THE NEED OF TIME

Heart surgery or any other form of treatment and cardiac rehabilitation must reach every needy patient to avoid tragedies. The provisions provided by government in the field of health care are not sufficient to take care of every increasing population of our country. There are many charity organizations established by various industrial houses, businessmen to provide support and welfare in health related problems to non affording population.

Even then these measures fall short in protecting precious lives of citizens suffering from heart disease.

With this scenario in background JHCF was formed. Since inception foundation has been very active in providing financial and other help to these poor heart patients. It has helped several hundred patients to undergo investigations such as angiography and also helped some of them undergo treatment like bypass surgery and heart valve replacement surgery, & other forms of open heart surgery & pace maker surgery.

AIMS & OBJECTIVES OF THE TRUST

The sole aim of Jain Heart Care Foundation is to not to allow any heart disease patient suffer, because of lack of funds.

Heart surgery or any other form of treatment and cardiac rehabilitation must reach every needy patient to avoid tragedies. The provisions provided by government in the field of health care are not sufficient to take care of ever increasing population of our country.

Even then these measures fall short in big way in protecting precious lives of citizens suffering from heart diseases.

Jain Heart care Foundation was formed by professionals along with benevolent donors in 1999.

ACTIVITIES OF FOUNDATION

- The foundation arranges Heart Disease Diagnostic Camps, in different parts of India where team of eminent doctors provide selfless free service.
- arranges Seminars and Lecture sessions for public and doctors .
- Provide free services, guidance, Medicines & financial help to needy patients and when required facilities of angiography and procedures like heart surgery and balloon angioplasty are carried out by best teams in best hospitals.
- Foundation is in co-operation with other trusts working in these field, to help patient in correspondence and recommendation with other trusts and donors for maximum relief.

FUTURE GOALS & PLAN OF ACTIVITY

- To establish cardiac rehabilitation program. Rejuvenation centre.
- To provide shelter and food to cardiac patients.
- Provide platform for public and professional education education about prevention of heart diseases.
- Establishment of network of heart care organizations in India.
- Establishment of best quality cardiac care specialty hospital.
